Machine Vision Kit - High Speed Rotary System (MVK-03)

- High Speed Rotary Industrial Machine Vision System
- Compatible with LabVIEW and Vision Development Module
- Compatible with NI Vision Builder AI
- Designed specifically for educational purpose to experiment high speed machine vision concepts and applications
- Extensible to Deep Learning and AI Vision
- NI Dedicated Software sold separately
- Actual delivery may differs from displayed image depends on selected option

Overview

The Machine Vision Kit – High Speed Rotary System (MVK-03) contains high speed camera, sensor and specimens for high speed machine vision concepts and application experiment. The kit is compatible with either NI LabVIEW with Vision Development Module and NI Vision Builder AI as well as to provide an image acquisition ability as an extension to optional NI reconfigurable I/O hardware that allows you to learn and experiment multiple design concepts with one system.

Applies With:

- Scientific, Research and Development, Educational
- Manufacturing, Medical
- Test and Measurement, Semiconductor, Electronics

Applications:

- Experimentation of vision hardware setup
 - Prototyping and Proof-of-Concept of vision inspection
 - Training for machine vision system development
 - 6 units of Electronics PCBs as hardware sample for inspection software development
-
